Where You Should Be

- Loading simple datasets
- Filtering
 - Relationship filtering
 - Sampling and subsampling
 - Binning
- Mutation
 - Transforming a column
- Functions and Classes
 - Designing for reusability
 - Emitting new instances of classes
- Visualizing data
 - Line, scatter, histogramming and binning
 - Modifying axes
 - Styling plots manually and automatically
 - Simple image plots

Today

- Catching Up
 - Data formats and their relevance
 - Transformations
 - Homework
- Types of Visualizations: Part I
 - “If this, then that...”
 - Relationships
 - Distributions
- Understanding Color
 - How do eyes work?
 - What are colors?
 - Colormaps and palettes

CSV

Column 1	Column 2	Column 3	Column 4	Column 5
.
.
.
.
.
.
.

- Lowest-common denominator format
- Flexible delimiters
- Ad hoc comments and headers
- Row-oriented
- Row-size can vary: no implicit indexing

390,1.83970e-003,-4.53930e-004,1.21520e-002

(assuming ASCII encoding)

“390”	51	57	48
-------	----	----	----

0	0	1	1	0	0	1	1
---	---	---	---	---	---	---	---

0	0	1	1	1	0	0	1
---	---	---	---	---	---	---	---

0	0	1	1	0	0	0	0
---	---	---	---	---	---	---	---

390,1.83970e-003,-4.53930e-004,1.21520e-002

(assuming ASCII encoding)

“390”	51	57	48
-------	----	----	----

390.0		0	0	0	0	0	96	120	64
-------	--	---	---	---	---	---	----	-----	----

HDF5

- Columnar store
- Chunking
- Can be extended
- Flexible data types in-memory and on-disk
- Hyperslab and boolean indexing
- Numeric
- Fixed-length strings
- Variable strings
- Groups & hierarchies
- Fine-grained key/val metadata

Transformations

- Affine
 - Parallel lines remain parallel
 - Defined by offset and scale matrices
- Functional transformations
 - Continuous
 - Invertible
 - Log, log2, sqrt(), etc
- Dimensionality Reduction

Affine

Affine

Affine

$$\begin{aligned}x_2 &= A_x x_1 + b_x \\y_2 &= A_y y_1 + b_y\end{aligned}$$

Affine

$$\begin{aligned}x_2 &= A_x x_1 + b_x \\y_2 &= A_y y_1 + b_y\end{aligned}$$

Affine

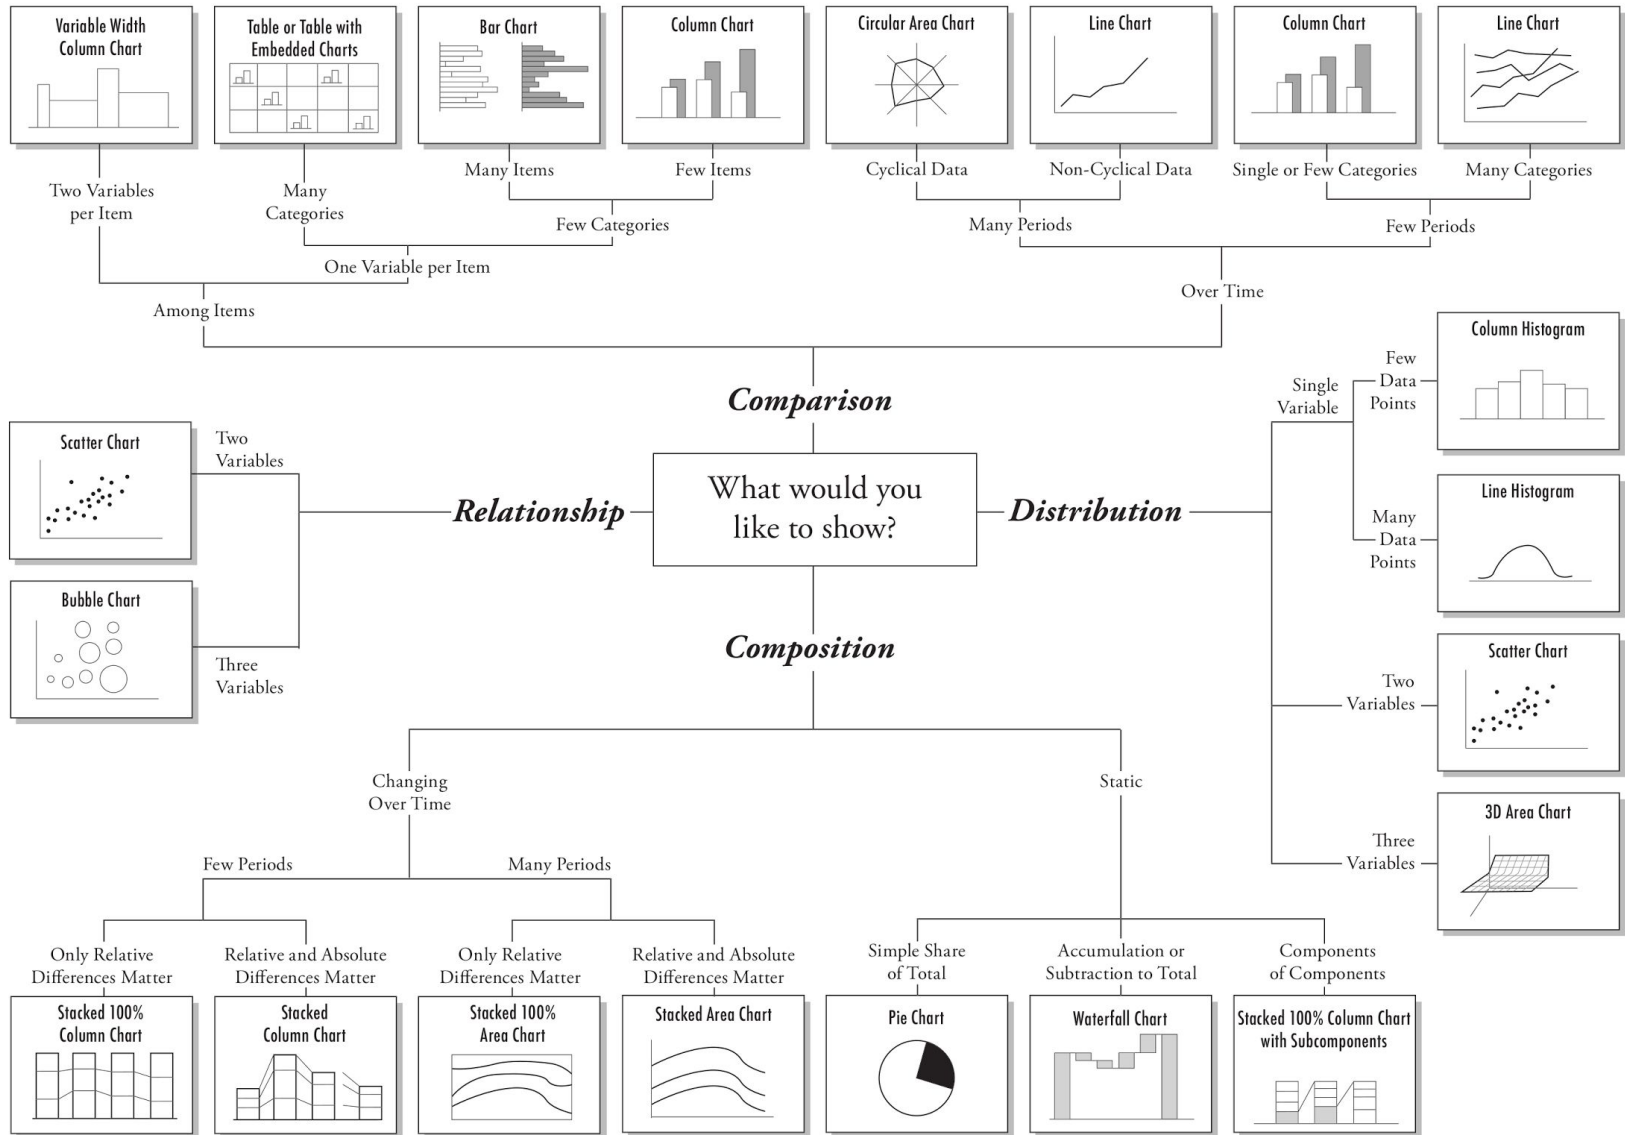

$$\begin{aligned}x_2 &= A_x x_1 + b_x \\y_2 &= A_y y_1 + b_y\end{aligned}$$

Choosing Your Visualization

- Do you understand the type of data you are examining?
- What types of relationships do you want to explore?

Chart Suggestions—A Thought-Starter

Choosing Your Visualization

Abela's Categories:

- Relationship
- Comparison
- Distribution
- Composition

Relationship

Two Variables
(Scatter)

Three Variables
(Bubble)

- Latitude & Longitude
- Diameter
- Tree Species
- Number of Trunks
- Location Type
- Common Name

- Project Description
- Project Cost
- Square Feet Added
- Parcel Number
- Permit Number
- Building Type
- Year
- City

Comparison

- Among items
 - One variable per item
 - Two variables per item
- Over time
 - Many periods
 - Cyclical
 - Non-Cyclical
 - Few periods
 - Single or few categories
 - Many categories

Color

Rods (low-light) and cones (color) mediate vision. Humans have about 20 times as many rods (120 million) as cones (6 million).

Modules and Scripts

- Reusability
- Execution

the humble import statement

- The “import” statement loads and makes accessible
- Python will search paths to find the script to import
 - `sys.path` is a list of these
 - Current directory may or may not be included
- Modules are reusable collections of functions and scripts
 - The presence of an `__init__.py` file indicates something is a package
 - We will be building a module
